Compare Reg Model and SIFT model

Create graphs to compare training loss and validation accuracy

```
In [18]: # # TODO
```

```
In [19]: # create new model
# incorporate this sift descriptor written in pytorch
# it is written on gpu though so idk, to work out

# https://github.com/hmorimitsu/sift-flow-gpu
```

```
In [20]: # train new model

# test on test set
```

```
In [21]: # compare classifications

# # Plot the loss function and train / validation accuracies
# plt.subplot(2, 1, 1)
# # print(train_loss)
# plt.plot(train_loss, label='SGD')

# plt.plot(train_loss_adam, label='Adam')
# # plt.plot(train_loss[:49])
# plt.title('Loss history')
# plt.xlabel('Epoch')
# plt.ylabel('Loss')
# plt.legend()

# plt.subplot(2, 1, 2)
# plt.plot(train_accuracy, label='train SGD')
# plt.plot(val_accuracy, label='val SGD')
# plt.plot(train_accuracy_adam, label='train Adam')
# plt.plot(val_accuracy_adam, label='val Adam')
# # plt.plot(train_accuracy[:49], label='train')
# # plt.plot(val_accuracy[:49], label='val')
# plt.title('Classification accuracy history')
# plt.xlabel('Epoch')
# plt.ylabel('Classification accuracy')
# plt.legend()

# plt.tight_layout()
# plt.show()
```
